

Programming Thinking

Hardware

Pepe García

Plan for this session

- Learn a bit about hardware

Plan for this session

- Learn a bit about hardware
- Try the VSCode editor

CPU

- It's the part of the computer capable of *computing*.

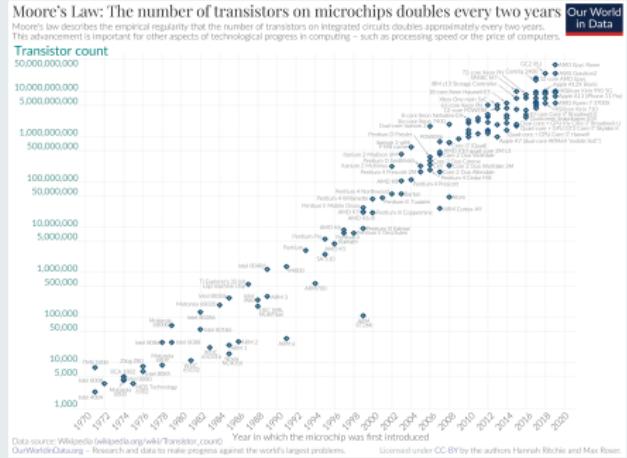

CPU

- It's the part of the computer capable of *computing*.
- Speed measured in hertz

Moore's law

Moore's law is the observation that the number of transistors in a dense integrated circuit (IC) doubles about every two years. Moore's law is an observation and projection of a historical trend. Rather than a law of physics, it is an empirical relationship linked to gains from experience in production.

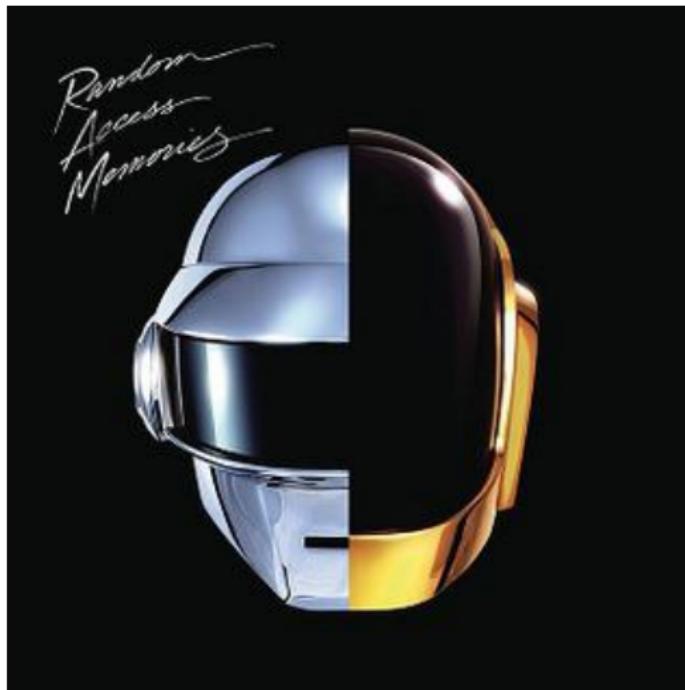

Moore's law

Nowadays, although the number of transistors in chips is still increasing over the years, the pace has slowed down. The way we're achieving faster speeds nowadays is by having more cores working at the same time.

RAM

Not this *Random Access Memories...*

RAM

But **this** Random Access Memory!

RAM

- RAM is the short term memory of a computer

RAM

- RAM is the short term memory of a computer
- Think of it like a big shared blackboard

RAM

- RAM is the short term memory of a computer
- Think of it like a big shared blackboard
- Divided in addresses

RAM

- RAM is the short term memory of a computer
- Think of it like a big shared blackboard
- Divided in addresses
- Not persistent. *if computer is powered down, contents are lost*

RAM

- RAM is the short term memory of a computer
- Think of it like a big shared blackboard
- Divided in addresses
- Not persistent. *if computer is powered down, contents are lost*
- Fast (Random Access)

HDD / SSD

- Hard Disk Drives or Solid State Drives are the long term storage of the computer

HDD / SSD

- Hard Disk Drives or Solid State Drives are the long term storage of the computer
- Persistent

HDD / SSD

- Hard Disk Drives or Solid State Drives are the long term storage of the computer
- Persistent
- Slower than RAM

HDD / SSD

- Hard Disk Drives or Solid State Drives are the long term storage of the computer
- Persistent
- Slower than RAM
- Higher capacity than RAM

Recap. What happens when Spyder runs a file?

Whiteboard

Let's understand what happens in under the hood of our computer when we run a file in VSCode

Review

Review

- **CPU** is the *computing* part of our computer

Review

- **CPU** is the *computing* part of our computer
- **RAM** is used for the runtime of our programs to hold volatile data

- **CPU** is the *computing* part of our computer
- **RAM** is used for the runtime of our programs to hold volatile data
- **HDD / SSD** stores non-volatile data, it's **way** slower than RAM.
