The Course

• 7 sessions

The Course

- 7 sessions
- 1 final exam

Grading

This course is graded as NGS/NGU, and the note will depend on the final exam.

The final exam consists of multiple choice/multiple answer questions, and is open book.

Criteria	Score %	
Final Exam	100 %	

Grading

The grading for this course will either be **Non Graded Satisfactory** or **Non Graded Unsatisfactory**.

If you get 50% or more in the overall score, you get **NGS**, and **NGU** otherwise.

Participation

Please, raise your hand at any point in class if you want to ask something, make an useful comment, or answer a question. (if remote, use Zoom's raise hand feature, so that it's easier to track it)

In this course we will build the fundamentals for the rest of the courses in the masters that rely on programming. We will:

In this course we will build the fundamentals for the rest of the courses in the masters that rely on programming. We will:

• Learn What's programming

In this course we will build the fundamentals for the rest of the courses in the masters that rely on programming. We will:

- Learn What's programming
- Understand how computers execute programs

In this course we will build the fundamentals for the rest of the courses in the masters that rely on programming. We will:

- Learn What's programming
- Understand how computers execute programs
- Learn the basics of Python

• Know each other a little bit!

- Know each other a little bit!
- Learn about software

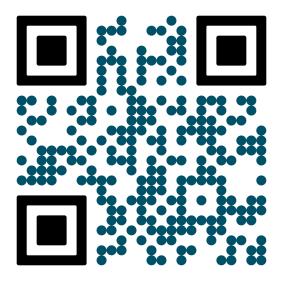

- Know each other a little bit!
- Learn about software
- Understand what are algorithms and data structures

- Know each other a little bit!
- Learn about software
- Understand what are algorithms and data structures
- Install Anaconda

Throughout this course we will use Python as our programming language, but there are many more!

Throughout this course we will use Python as our programming language, but there are many more!

What programming languages have you heard of?

There are several ways of classifying programming languages.

Languages classification

Language	Paradigm	Execution	Purpose
Python	imperative	interpreted	general
Java	object oriented	compiled	general
Javascript	imperative	interpreted	general
Haskell	functional	compiled	general
SQL	declarative	interpreted	specific
HTML	declarative	interpreted	specific

There are several ways of classifying programming languages.

Languages classification

Language	Paradigm	Execution	Purpose
Python	imperative	interpreted	general
Java	object oriented	compiled	general
Javascript	imperative	interpreted	general
Haskell	functional	compiled	general
SQL	declarative	interpreted	specific
HTML	declarative	interpreted	specific

Python

Python is one of the most used languages right now. Its applications range from Data Science to Web servers

Coding is basically putting words together following a programming language specification.

Usually, we put these words directly in a text file and then execute it as a program.

```
31
33
34
 35
 36
 38
 39
                    self.fingerprints.
            @classmethod
            def from_settings(cls, settings
  42
                 debug = settings.getbool(
                 return cls(job dir(settings)
   44
45
             def request_seen(self, req
    47
                  if fp in self.fingerprints:
    49
                   self.fingerprints.add(fp)
    51
52
                        self.file.write(fp + os.lineses
                      self.file:
               def request_fingerprint(self, request
                    return request_fingerprint(req
```

But we can feed these words directly into the programming language **console**.

Demo

Python console

Let's see how we can use the console to code!

Install Anaconda platform

Now we will install the Anaconda platform in our computers.

- go to https://www.anaconda.com/products/distribution
- ② Go to the bottom of the page, to the Anaconda Installers section, and download the graphical installer for the 3.9 version for your operating system.

Install Anaconda platform

Checkpoint

Is anybody lost or has problems installing the software?

What is a program?

A program is a piece of software with a specific task.

What is a program?

A program is a piece of software with a specific task.

This task can be something **big**, like handling a nuclear reactor, or something **small** like Ctrl-c/Ctrl-v.

What is a program?

A program is a piece of software with a specific task.

This task can be something **big**, like handling a nuclear reactor, or something **small** like Ctrl-c/Ctrl-v.

There are two main components of programs, **algorithms** & **data** structures.

What is an algorithm?

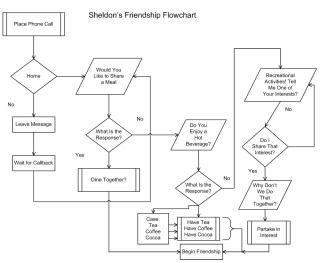

What is an algorithm?

An algorithm is a sequence of steps that guide the computer in how to solve a problem
